FLIGHT HELMET SYSTEM

ERMES

IN-EAR SYSTEM

Engineered for Precision Communication and Performance

Ermes In-ear System are designed for optimal communication in motorsport, F1 helicopters, and airplanes. Their compact design ensures comfort under helmets, while advanced technology provides exceptional clarity and frequency response. The balanced armature driver delivers clear speech, making them ideal for critical messaging during performances.

KEY FEATURES

ERGONOMIC FIT

The ergonomic earbuds design is the result of years of studies and tests on over a MILLION of ear canal impressions! For this reason, Ermes will fit comfortably in all ears.

CLEAR COMMUNICATION

Due to the technology and the materials used for the realization, our Ermes guarantee crystal clear communications, without interferences or white noise.

UNMATCHED COMFORT AND HEARING PROTECTION

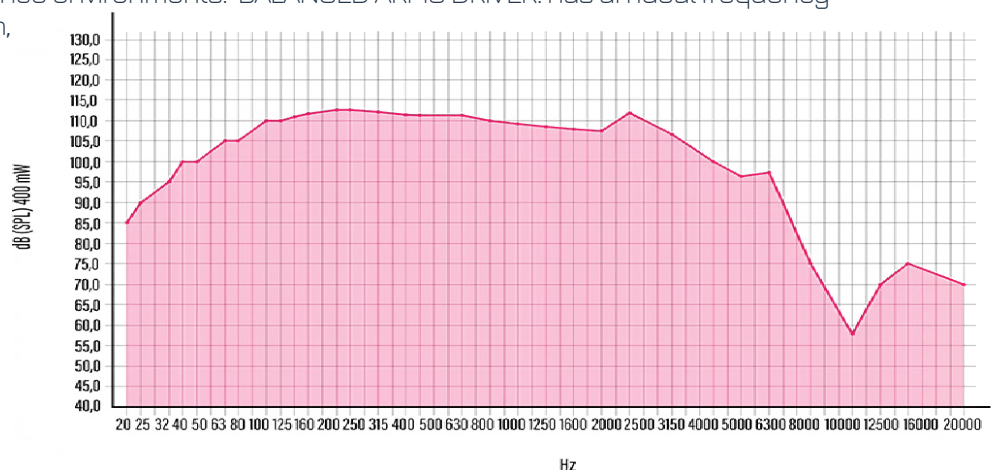

Our Ermes earbuds use a special ergonomic shape developed and patented in our laboratories. This innovative shape offers exceptional hearing protection combined with a high degree of comfort. Our earbuds are made of soft non-toxic and hypoallergenic silicone, making them much more comfortable and suitable for every ear!

TECHNOLOGY

Ermes technology is distinguished by the quality of receiver frequency response. After extensive research and field experiments, we have chosen the best receivers capable of supporting communications in high-performance environments. **BALANCED ARMS DRIVER:** has an ideal frequency range (up to 8Mhz) to ensure clean, clear and crisp voice quality.

THE SEALING TRIANGLE

By exploiting the union of these three points, which form a "sealing triangle", we created an ergonomically shaped earbud that guarantees a high level of stability, protection and comfort.

Contact Us

CFHELMETS is committed to designing and manufacturing advanced performance capabilities for worldwide aircrew personnel. For more information, please contact CFHELMETS at hello@cfhelmets.com or one of our authorized distributors.
